

**Amendments to the Abstract:**

Replace the Abstract with the following:

-- A hardware fitting for an all-glass door, including a first fitting half arrangeable on an outer side of the door, a second fitting half arrangeable on an inner side of the door, an actuatable nut arranged between the first and second fitting halves, a lock having a locking bolt and arranged between the first and second fitting halves, and a door stop integrated into at least one of the first and second fitting halves. The locking bolt is slidable between a retracted and an extended position in response to a movement of the nut. --
